this book is aimed to provide the basic preparatory material to the students who wish to study the electromagnetism as part of their course study in the discussion of different concepts of electromagnetism use of vectors and coordinates systems are unavoidable most of the books avoid details of these topics due to scope of the book or the syllabus most of the students take it for granted the formulae stated in the book some students when try to understand the three dimensional aspects of the coordinate systems they find some confusion to help student clear their concepts on these aspects and to answer how different readily given expressions are derived we have come forward to write this book the book starts discussion from very basic definitions of vector terminology and then relates this with the coordinate systems most needed coordinate systems are

cartesian cylindrical and spherical coordinate systems these systems are discussed from the basic level and culminate into the derivations of the longer expressions as problems are already available in the books of similar nature authors have not included them in this book it is hoped that this book would clear most of the concepts needed to study the electromagnetism

lost generations is a tragicomic at times hilarious saga of a well off sikh family forced out of rawalpindi during the partition of punjab in 1947 the story follows the family s struggles and partial rehabilitation as they settle in delhi attempting to keep up the appearances of their affluent past and preserve their old mores around them however the world is disintegrating and eventually they face death destitution and an uncertain future once again in 1984 lost generations is a story of misogyny sexism racism intolerance corruption exploitation and materialism all innate to indian society
